

NSSM Windows Service Deployment Guide

This document explains step-by-step how to install and configure NSSM (Non-Sucking Service Manager) to run a Node.js application as a Windows service.

1. Download NSSM

Download NSSM from the official site: <https://nssm.cc/download> Extract the ZIP file and place the folder in a stable location, for example: C:\nssm

2. Open Command Prompt as Administrator

Open the Start menu, search for 'Command Prompt', right click and choose 'Run as administrator'.

3. Install the Service

Run the following command:

```
nssm install EnergyDataCollector
```

This will open the NSSM configuration window.

4. Configure Application Settings

In the NSSM window configure the following fields:

Path: C:\Program Files\nodejs\node.exe

Startup directory: C:\YourProjectFolder

Arguments: yourScript.js

5. Configure I/O Logging (Recommended)

Go to the I/O tab and configure log files:

Output (stdout): C:\logs\service-output.log

Error (stderr): C:\logs\service-error.log

This will capture console output and errors.

6. Install the Service

Click 'Install Service'. The service will now be registered in Windows.

7. Start the Service

Run the following command:

```
nssm start EnergyDataCollector
```

8. Check Service Status

Run:

```
nssm status EnergyDataCollector
```

Expected output: SERVICE_RUNNING

9. Verify Service in Windows

Open services.msc and locate 'EnergyDataCollector'. Ensure the Startup Type is 'Automatic'.

10. Configure Automatic Restart on Failure (Recommended)

Run:

```
sc failure EnergyDataCollector reset= 0 actions= restart/5000
```

If the process crashes, Windows will restart it after 5 seconds.

11. Useful NSSM Commands

Restart service:

```
nssm restart EnergyDataCollector
```

Stop service:

```
nssm stop EnergyDataCollector
```

Edit configuration:

```
nssm edit EnergyDataCollector
```

Remove service:

```
nssm remove EnergyDataCollector confirm
```
